Shaded boxes indicate the vaccine can be given during the shown age range.

1 The second dose of HepB may be given either at the 1 month or 2 month visit.

2 Two doses given at least four weeks apart are recommended for children aged 6 months through 8 years of age who are getting a flu vaccine for the first time and for some other children in this age group.

\* Milestones adapted from Bright Futures: Guidelines for Health Supervision of Infants, Children, and Adolescents Third Edition, edited by Joseph Hagan, Jr., Judith S. Shaw, and Paula M. Duncan, 2008, Elk Grove Village, IL: American Academy of Pediatrics.

If your child has any medical conditions that put him at risk for infections or is traveling outside the United States, talk to your child's doctor about additional vaccines that he may need.
